Agenda Items

1. Further Description of the project: - how it should be, - The items it must have
2. Questions

Action Items

1. Further Description of the project: - how it should be, - The items it must have

-User Registration should be for :

 1. Standard Patient user, here this user will register to the system by providing his/her first name, last name, Identification number, date of birth, location(can auto complete), phone number, email address, preferred password(which must be hashed when being stored in the database)

-After registration back to login then display a form(as a home page in text view) after login. The form will have Name, surname, age, previous doctor visits with the details of the visits

 2. Doctors, here the doctors will register to the system by providing their first name, last name, specialization, phone number, password, email address, where they acquired their qualification.

-The homepage for the doctor should display history of patients he/she has seen, on that list of patients, when you click on a certain patient there should be a details page(Dates of appointment, name of a patient, reason of patient's visit, etc.)

- A patient can only select to see a doctor from 5 specialist doctors

User story for doctor

-View a list of patients they have seen

-The history of the patient's visits

- Booking System, here Rylan elaborated that patients need to be able to book to see doctors.

2. Questions

- Rylan doesn't have any problem with us using android studio and Flutter to implement the project.

- Rylan is also cool with meeting up at 6 every Thursday, we just have to send him a calendar invite beforehand.

- He also made emphasis on not forgetting to book the sprint planning and review meeting, which we have to do by sending him a calendar invite.
